

JOSPHAT KURIA NJUGUNA

Enterprise Transformation & Commercial Operations Leader

Finance & ERP Leadership • Group-Wide Tendering, Procurement & OEM/Import Sourcing

• Supply Chain Transformation • Business Intelligence

Nairobi, Kenya

• josphatkuria3@gmail.com • +254701386907 • <https://www.linkedin.com/in/kurianjuguna/>

EXECUTIVE PROFILE

Enterprise transformation, commercial, and operations leader with over eight years of experience across finance, ERP and business systems, Group-wide tendering and procurement, international OEM and manufacturer sourcing and import, and large-scale supply chain change. Currently leads the finance, operations, and commercial mandate for an eight-company diversified group. Built its first integrated enterprise platform before growing the role into Group-wide leadership of high-value tendering, contract execution, and international sourcing, across specialised equipment, major construction and infrastructure works, and supply opportunities valued from the millions into the billions of Kenyan shillings. Earlier, led the digital transformation of a national agricultural export supply chain, connecting approximately 30,000 contracted farmers to international markets. Holds a BSc in Actuarial Science with First Class Honours, having ranked first in the graduating class of 2018. Leads and builds teams well beyond the direct reporting line, moving comfortably between board-level financial governance, commercial negotiation, and technical systems delivery to turn complex, multi-stakeholder operations into governed, data-driven decision-making.

SELECTED CAREER IMPACT

- **Enterprise-Wide ERP Transformation.** Architected and led the Group's first integrated business platform across eight subsidiaries in manufacturing, hospitality, real estate, construction, trading, and corporate services, unifying finance, procurement, HR and payroll, inventory, and executive reporting under one governed environment.
- **Group-Wide Commercial & Tendering Leadership.** Leads sourcing, bidding, and delivery of high-value tenders and contracts, ranging from the millions into the billions of Kenyan shillings. The portfolio spans specialised equipment, major construction and infrastructure works, and supply agreements, backed by an international OEM and manufacturer sourcing network.
- **National Supply Chain Digitisation.** Redesigned a national agricultural export value chain connecting approximately 30,000 contracted farmers with procurement, logistics, factory operations, and export compliance, strengthening traceability and international certification readiness.
- **Data Governance & Executive Decision Support.** Built executive reporting and business intelligence frameworks across finance, operations, and donor-funded programmes, turning fragmented data into trusted, real-time management information.
- **Team & Cross-Functional Leadership.** Leads a growing team alongside broad functional and cross-functional leadership across finance, procurement, projects, and technical departments, partnering directly with directors and business-unit leaders Group-wide.
- **Academic & Technical Foundation.** First-Class Honours in Actuarial Science, ranked first in class, with certifications in Tableau and Power BI: an analytical foundation for an evidence-led approach to business transformation.

CORE LEADERSHIP & FUNCTIONAL EXPERTISE

Business & Enterprise Transformation: Enterprise Transformation, Business Process Redesign, Digital Transformation, Organisational Change, Operational Excellence, Enterprise Governance, Change Adoption

Commercial, Tendering & Procurement: Tender & Bid Management, Bid/No-Bid Strategy, Commercial Proposal Development, Costing & Pricing, Contract Management, Mobilisation & Implementation, Supplier & OEM/Manufacturer Prequalification, International Sourcing & Import Coordination, SAP SRM/C-Folder

Finance, Risk & Governance: Financial Management, Accounts Payable & Accounts Receivable, Internal Controls, Financial Reporting, Budgeting & Forecasting, Audit Readiness, Regulatory Compliance, Risk Management, Corporate Governance

Enterprise Systems & Process Automation: ERP Architecture & Implementation, Business Systems Integration, Workflow Design, Process Automation, Multi-Company Operations, Master Data Management, User Access & Control Frameworks

Supply Chain & Operations: Supply Chain Transformation, Procurement, Inventory Management, Import & Export Operations, Manufacturing Operations, Logistics Coordination, Vendor Management, Contract & Tender Coordination

Business Intelligence & Decision Support: Business Intelligence, Executive Reporting, Performance Management, Data Analytics, KPI Framework Development, Management Information Systems, Data Governance

Leadership & Cross-Functional Delivery: Team Leadership, Cross-Functional & Matrix Leadership, Stakeholder Engagement, Project Delivery, Training & User Adoption, Strategic Execution, Problem Solving

PROFESSIONAL EXPERIENCE

Finance, ERP & Operations Lead

March 2024 – Present

Unique Group of Companies, Nairobi, Kenya

Joined the Group to lead its first integrated enterprise operating environment, at a time when operations depended on manual processes, printed memos, disconnected spreadsheets, and standalone accounting software. Since then, the mandate has broadened well beyond the original finance, ERP, and operations brief. Alongside continued ownership of enterprise systems, financial governance, and operational reporting, the role now carries Group-wide leadership of commercial tendering, procurement, international OEM and manufacturer sourcing, and import coordination, reflecting increasing organisational trust and an expanding scope of authority within the same role.

Enterprise Systems, Finance & Governance Transformation

- Architected and led implementation of the Group's first integrated enterprise operating environment, the Unique Group Integrated Enterprise Ecosystem (UG-IEE), unifying finance, procurement, inventory, manufacturing, HR, payroll, projects, customer management, asset management, and executive reporting across eight subsidiaries in manufacturing, hospitality, real estate, construction, trading, and corporate services.
- Redesigned core business processes Group-wide, replacing paper-based approvals, manual documentation, and disconnected departmental workflows with standardised digital processes that strengthened accountability and established reliable, consistent information flow across all business units.
- Designed the Group's enterprise governance framework, including role-based access controls, structured approval hierarchies, audit trails, and workflow automation, reducing exposure to unauthorised changes and strengthening confidence in financial and operational information.
- Integrated statutory compliance, biometric attendance, payroll processing, banking workflows, and tax reporting into the enterprise environment, reducing manual intervention and strengthening regulatory and operational consistency.
- Built and holds ongoing oversight of a multi-company financial architecture that connects all subsidiaries within a common reporting structure, including Group-wide accounts payable and accounts receivable operations. This gives leadership consolidated financial visibility while tightening control over inter-company transactions, shared resources, and internal governance. It also introduced standardised, automated inter-company processes for purchasing, sales, and inventory movement.
- Established a central procurement and inventory management environment giving leadership visibility across purchasing activity, supplier performance, warehousing, and stock availability. This improved procurement planning and asset utilisation, and formed the operating foundation for the Group-wide tendering and sourcing leadership later added to the role.
- Developed executive Power BI dashboards, built on ERP and SQL data, giving leadership real-time visibility into financial performance, procurement, inventory, workforce, and operations Group-wide, automating recurring reports and shifting decision-making from retrospective reporting to timely operational insight.
- Led user adoption and change management across departments through stakeholder engagement, process documentation, training, and post-implementation support, partnering with directors, department heads, and finance teams to ensure enterprise systems served real operational needs rather than merely digitising existing manual processes.

Commercial, Tendering, Procurement & OEM/Import Leadership

- Leads Group-wide identification, qualification, and pursuit of high-value tender and contract opportunities across government, public-sector, institutional, corporate, and infrastructure markets, with a portfolio spanning

one-off supply contracts, framework agreements, and major construction works valued from the millions into the billions of Kenyan shillings.

- Owns the end-to-end bid lifecycle for tenders across the Group's eight subsidiaries, covering opportunity screening; requirement and specification review; commercial assessment and bid/no-bid judgement; bid strategy; technical and commercial proposal development; quotation sourcing, costing, and pricing; bid preparation and compilation; and submission and clarification management.
- Builds and manages an international manufacturer and OEM sourcing network, leading supplier and manufacturer identification, prequalification, and technical evaluation to support specialised equipment and major construction and project tenders, alongside continued engagement with local suppliers.
- Directs contract management from award through mobilisation and implementation, coordinating customers, suppliers, OEMs, and internal departments, including finance, procurement, projects, and technical teams, to deliver against contractual and commercial commitments.
- Integrates international sourcing and import coordination into commercial execution, managing the full sourcing-to-delivery chain, including supplier and customer coordination, logistics, and commercial and financial administration, for internationally procured equipment, materials, and specialised goods.
- Uses SAP, including SAP SRM/C-Folder, as the core commercial and tender-management platform, governing supplier records, quotations, bid submissions, and procurement workflows within a single system of record.
- Leads tendering and procurement as a core commercial capability for the Group, working directly with directors and business-unit leaders to align bid strategy with wider commercial and growth objectives.
- Leads a growing direct team, currently six direct reports and expanding, while also carrying broader functional ownership and cross-functional and matrix leadership across the wider eight-company Group, working closely with directors, department heads, and business-unit leaders in departments and subsidiaries outside the direct reporting line.

Role Evolution & Impact: *What began as a finance and ERP transformation brief has become a broad commercial and operational mandate. Moved the Group from eight businesses coordinated manually with fragmented information to a connected enterprise with governed systems, consolidated financial oversight, and a professionalised, Group-wide tendering and international sourcing capability, and the role continues to expand in scope and authority.*

Ten Senses Africa (EPZ) Ltd

April 2018 – February 2024

Nairobi, Kenya

Supply Chain & Digital Transformation Lead

June 2019 – February 2024

Led the redesign of the organisation's agricultural supply chain into a fully integrated digital operating environment, connecting approximately 30,000 contracted farmers, regional field operations, procurement, logistics, manufacturing and factory processing, finance, inventory, compliance, and export functions into a single traceable ecosystem.

- Designed and led implementation of a national farm-to-export traceability platform, establishing complete product traceability from farmer registration through procurement, transport, processing, export, and final customer verification.
- Introduced a digital farmer management framework capturing farm locations, production records, certification status, quality history, and supplier information in a single trusted system, strengthening farmer profiling and compliance with organic and Fairtrade certification requirements.
- Overhauled procurement operations, replacing manual buying with structured digital workflows for farmer verification, quality assessment, pricing, transaction approval, and documentation, and integrated digital weighing technology at the point of purchase to improve transaction accuracy and settlement confidence.
- Designed an automated payment process linking approved procurement transactions directly to mobile money disbursement, accelerating farmer payments, reducing cash-handling risk, and strengthening supplier trust.
- Established end-to-end inventory visibility across procurement, collection centres, transport, warehousing, and factory processing, and extended traceability into processing batches and export consignments to support quality assurance and export compliance.
- Developed management reporting and operational dashboards giving leadership timely visibility into procurement, farmer activity, inventory, logistics, production, and payments, enabling faster operational and strategic decision-making.

- Supported delivery of internationally funded agricultural development programmes while maintaining compliance with Fairtrade, Organic, Ecocert, KEPHIS, KEBS, OSHA, NEMA, and Agriculture and Food Authority requirements.
- Led cross-functional stakeholder coordination across field officers, agronomists, factory teams, finance, logistics, quality assurance, exporters, technology partners, and executive leadership to embed the transformation across the organisation and sustain adoption.

Transformation Outcome: *Converted a manually managed agricultural supply chain into a connected digital ecosystem that strengthened farmer confidence, operational control, export traceability, and regulatory compliance, and gave leadership trusted, evidence-based information across the value chain.*

Management Trainee, Operations & Supply Chain

April 2018 – May 2019

Completed a structured management trainee programme providing practical, cross-functional exposure across the organisation's core business functions, building the operating foundation for later leadership in supply chain digitisation and enterprise transformation.

- Rotated across procurement, warehousing, inventory management, logistics, production support, and finance, gaining end-to-end exposure to the movement of agricultural products from sourcing to export.
- Supported procurement planning, supplier coordination, inventory control, and warehouse operations, contributing to the efficient movement of materials across the supply chain.
- Conducted stock verification, inventory reconciliation, and operational reporting, improving inventory accuracy and day-to-day operational control.
- Contributed to process improvement initiatives that streamlined workflows and strengthened cross-departmental coordination and information flow.
- Demonstrated strong analytical ability and problem solving, earning progression into more strategic supply chain and digital transformation responsibility within the organisation.

EDUCATION

BSc Actuarial Science, First Class Honours

Sep 2014 – Apr 2018

Deedan Kimathi University of Technology, Kenya

Ranked first in the Actuarial Science Class of 2018.

Relevant coursework: Statistical Modelling, Financial Mathematics, Financial Risk Management, Econometrics, Investment & Portfolio Theory, Financial Accounting, Statistical Programming.

Kenya Certificate of Secondary Education (KCSE)
